

Editor's comment:

We have carefully analyzed the paper and the evaluation process.

However, at present, the paper requires two important additions:

1. All fungicides, besides the commercial name, must also be mentioned in the chemical composition. This will greatly help to understand the paper, because these plant protection products have different commercial names, from one country to another.
2. All tables must have all the abbreviations used in the tables under the table, in note.

Author's feedback:

1. The chemical composition of all the fungicides used are given below in a tabular form:

| Commercial name | Chemical composition |
|-----------------|---|
| Contaf 5 EC | Hexaconazol 5 % |
| Bavistin DF | Carbendazim 50 % |
| Companion | Mancozeb (63 %) + Carbendazim(12%) |
| Fiasta Z-78 | Zinc ethylene bis-dithiocarbamate (Zineb) |
| Matco 72 WP | Mancozeb (64 %) + Metalaxyl (8 %) |
| Blitox 50 WP | Copper oxychloride (50 %) |
| Cabriotop | Pyrachlostrobin (5 %) + Matiram (55 %) |

2. The abbreviations used in the tables have given under the tables, in note.
