SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Annual Research & Review in Biology	
Manuscript Number:	Ms_ARRB_34380	
Title of the Manuscript:	AGGREGATION OFBASIC REGULAR BLOOD ELEMENTS IN CALVES	
	OFMILK FEEDING	
Type of Article:	Short communication	

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Obtained data have to be analysed by one-way repeated measures ANOVA followed by the post hoc test e.g. Tukey test. In table exact P values have to be added shoving the significance of the differences, between the days. Please clarify the statistical model. Additionally, please clarify if the animals were fed from the bucket, or were kept with their dams? If the animals were bucket fed please provide the amount of ingested milk as a percent of body weight. I am also suggesting the change of the manuscript title on: Aggregation of selected blood elements in milk fed calves.	

Reviewer Details:

Name:	Adam Lepczyński
Department, University & Country	Department of Physiology, Cytobiology and Proteomics, Faculty of Biotechnology and Animal Husbandry, West Pomeranian university of Technology, Szczecin, Poland
