

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Applied Science & Technology
Manuscript Number:	Ms_BJAST_22389
Title of the Manuscript:	IMPLICATION OF CLIMATE CHANGE ON GROUNDWATER RESOURCES
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
We need to establish that the change in groundwater regime is due climate change. If the authors conclude that climate change has not taken place than this paper becomes irrelevant as the authors claim to study implication of climate change on groundwater resources.	The objectives of this paper are: (1) to establish if there is climate change in the study area; (2) To study the effect of the climate change on the groundwater resources, if climate change can be established. Therefore, objective one has been achieved that there was no conclusive evidence to establish climate change and this was supported by the fact that there was no significant change in the groundwater yield. However, the title has been changed to "THE STUDY OF CLIMATE CHANGE" to address the concern of the Reviewer. The authors appreciate the reviewer for the comments.
