SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	As used by the author approach can not be considered entirely reasonable, since many things he expresses without any justification. For example, he speaks of many games, but does not describe their course.	The chapter "Trust Game" has been extended by a deeper explanation the design (simple or multiple reciprocity). A foundation regarding students as participants has been added (p.no. 2). In page no. 5 the statement regarding the statement about questionnaires and observation has been explained in a half sentence.
<u>Minor</u> REVISION comments	Speaking about socialization, but socialization is nothing else as entry into the company, but for stationary operating companies it sounds like nonsense.	The subchapter about socialization has been chosen clarify if different socialization backgrounds of trustor and trustee influence levels of trust and trustworthiness within a leadership relation. In fact, the question about socialization has been reduced on the level of education and has been integrated in the demographics.
<u>Optional/General</u> comments	In addition, the author has chosen to study a very complex concept, especially the use of which is represented, for example, in the source Sergey A. Surkov. Study on the Problem of Illusory, Conditional and Current Indicators on an Example Managing the Economy of the Company. British Journal of Economics, Management & Trade, 4(6): 941-946, 2014.	Thank you for this recommendation; the source is valuable but seems not to be directly related with the topic of this recent paper. As the submitted paper is part of a thesis the recommended source may find place in a sub chapter.
