

SDI Review Form 1.6

Journal Name:	British Journal of Applied Science & Technology
Manuscript Number:	2015_BJAST_18287
Title of the Manuscript:	Molecular Characterization and Antibiotic Resistance Profile of Bacteria Associated with <i>Brycinus longipinnis</i> from Eggua Station on Yewa River.
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The mentioned weight in the first paragraph of the results& Discussion is not presented in the table 1, is this weight is correct 245g foe a fish lengthen with 4-6cm The data in tables;3,4&5 can be presented in one. They didn't add new. What is the target of the cluster analysis in this work. It is better to do ANOVA test to know precisely which bacterial isolate is really dominant or rare (table 7). The results of the GEN-BANK indicated insufficient similarity% , this mean new bacterial strains are obtained you must get help from specialist in molecular techniques, these isolated may be putted in the GEN-BANK with new association numbers. You mentioned" R: 0-10mm inhibition" table 6, I think 1cm around the antibiotic disc means this isolate is susceptible and not resistant for the tested antibiotic	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
