PART 1: Review Comments

	Reviewer’s comment	Author’s comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	This survey is very simple and useful for clinical CT physician. More statistical results including the correlation related to the Radiation Risk and the number of physicians. Please clarify the ethical issue if any.	In this work, the results obtained do not show a correlation between the number of physicians and the risk of ionising radiation. I believe that it may be a correlation between the type of specialty of physicians and their knowledge on the radiological risk of ionizing radiation. This work was carried out on the basis of an anonymous questionnaire with full respect for the confidentiality of participants and professional ethics.
<u>Minor</u> REVISION comments	Representative CT images should be provided.	
<u>Optional/General</u> comments
