

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Medicine and Medical Research
Manuscript Number:	Ms_BJMMR_32463
Title of the Manuscript:	A SURVEY OF DEOXYRIBONUCLEIC ACID
Type of Article:	

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>1. Lines 315-317: The goal is not to copy and paste the remark as it was presented to you but to look further, understand and explain it in your own way. We are just putting you on the right track</p> <p>2. Paragraph 5.7 : I re-emphasize my remark of the last time: “ We cannot talk about the effect of mutations without distinguishing between somatic and germ-line mutations, on the other hand it depends on the type of mutation for example some silent mutations have no phenotypic effect. Moreover, the mode of transmission of the gene is another notion to take into consideration for example a recessive mutation may not be expressed except in a state of homozygosity but may be inherited by successive generations”</p>	<p>Thanks once again for the observations.</p> <p>1. Noted and edited</p> <p>2. I have used table 3: to distinguish between somatic and germ-line mutations. However, sir, I think this article cannot discuss everything on DNA/Mutations.</p>
