

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Economics, Management & Trade
Manuscript Number:	Ms_BJEMT_20305
Title of the Manuscript:	Analysis of Namibian fishing product export prospects and diversification: Gravity Model Approach
Type of Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The author has carefully considered my comments and made most of the improvements that I suggested. However, in some cases the modifications were different from my suggestions. As the author explained, another reviewer suggested that mathematical formulas should be omitted to shorten the paper. Although I myself prefer the inclusion of some deeper theoretical foundations, including mathematical formulas, I can accept the present solution as well, as the newly added explanations make the paper clear and understandable without the gravity model maths. There is a small mistake in lines 245-246: 'hausman test' and 'wald test' should have capital first letters: 'Hausman test' and 'Wald test'. Please correct it. Also please check the format of the References, as the items do not follow the same system. In the case of <i>item 8 (line 397)</i> and <i>item 12 (line 407)</i> and <i>item 23 (line 438)</i> the publication year is written in brackets after the authors' name, while all the rest of the references use a different format. Please correct the format of items 8, 12 and 23, too. Otherwise, I recommend to accept the paper for publication.
