SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	1) The article needs (very badly) an English grammar and text revision. 2) In its current form, the article looks more like an end of semester assignment in Econometrics than a scientific paper – see, for example, section 3.3: the reader needs to know more about the data, and not only the data source ! An exception to this pattern is the fair literature revision, though. 3) It is of very poor informative content to study the relations between two variables only: GDP growth and foreign direct investment inflow. In spite of the evident econometric character of the paper, sound economic growth theory suggests other variables be used as controls – at least investment (as % of GDP) and human capital formation. For example, equations (6) and (7) could form a VAR model containing such control variables .	
Minor REVISION comments	1) The main “dependent” variable is not clearly defined: is it the LEVEL or the GROWTH RATE of GDP ? 2) Most probably it is only a problem with the text, but I didn't understand section 4.1's main result ...	
Optional/General comments
