

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Economics, Management & Trade
Manuscript Number:	Ms_BJEMT_24842
Title of the Manuscript:	The Impact of Domestic Debt on Agricultural Output in Nigeria (1985-2014)
Type of Article	Review paper

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The theoretical framework still needs to be revised. On empirical literature, please indicate that very little (if any at all) has been done in testing the relationship between debt and agriculture. You also need to review literature from other countries. What were the results of the studies regarding the relationship between debt and agriculture? Then on theoretical literature section you need to apply the Keynesian theory to the agricultural sector. Please show how the theory relates to the agricultural sector. Do farmers borrow money? If yes, they should be affected when interests rates rise.	The theoretical literature has been extended to capture the indirect consequences of domestic borrowing on cost of credit to farmers and total agricultural output. The scanty empirical literatures within the reach of the authors have been added.
