SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	The topic is vague and difficult to cover all aspect, as components or indicators of economic growth are numerous. The author concentrated on GDP and few other indicators. I suggest the author modify the topic by narrowing it to those indicators covered. 23. please, provide source of the information 34-37these can be supported with empirical source 76-77 why in the long-run,,,if you can justify 88. can you substantiate with theories or relevant literatures	- We used them as control variables. In case the causality tests based on this method are applied, the narrowed form can be used. - The 23. line is a common statement on the relationship between education and human skill. But, it can be removed. - The statement in 34-37. line is supported by the sources Teece (1998) and Amir, Lev (1996). - Because it is assumed that the impact of human capital on economic growth would be occurred in the long-run. In addition, FMOLS and DOLS are the methods that are used to test long-run relationship. - This statement is already in the new growth theory as stated in the 89. line. Also, this statement is derived from Pelinescu (2015).
<u>Optional/General</u> comments	In all the research is very relevant, but it lacks originality, justifying the choice of the study area will make the study more distinct.	Whereas this topic is extensively examined in the literature, it is considered that using FMOLS and DOLS methods contributes to originality. We will plan to do more specific studies on human capital by using econometric methods. Thank you for suggestions and contributions.
