

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Economics, Management & Trade
Manuscript Number:	Ms_BJEMT_30171
Title of the Manuscript:	WOMEN'S PERSPECTIVE ON ORGANIZATION AND THE ALTERNATIVE MEANS OF INCOME IN AGRICULTURE
New Title:	WOMEN'S PERSPECTIVE ON ORGANIZATION AND THE ALTERNATIVE MEANS OF INCOME IN AGRICULTURE IN THRACE REGION TURKEY
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
- The Introduction should end with a presentation of the target of the research. The goal should be explicit, such as an indication of factors, which have an influence on the generation of alternative income. Meanwhile, the Author writes: "... this is the first study to analyze the perspective of Thracian women regarding their approach towards alternative economic opportunities". - The Author should present the data source (official databases, questionnaires, etc.). What are Agricultural Farming Registration Systems? It should be supported with the http address, date of access and name of institution providing the data. The Author should also inform about the year of the publication of the presented data, etc. - Literature is added. - The logit model is presented. However, the information about the 0-1 criterion must be implemented (which data category obtained 0 or 1, what was an initial proportion of 0 and 1 in a sample). - I do not agree with the Author that the obtained results and the discussion section were rewritten in detail.	- In this respect, the aim of this study is to reveal the views of women in the Thrace region on alternative income possibilities and organization. - During the last ten years of the Turkish economy, although there were high economic growth rates, the unemployment rate did not diminish sufficiently, LFPR (labor force participation rate) remained low and the registered number of people employed could not be increased. During the post economic crisis period, the LFPR diminishes for female workers. The participation decision of the labor in the course of macro economic shocks is connected to the coherence of the labor market to the fluctuations (Cengiz and Sahin, 2014). - Line 163-173
