

Editors' Comment:

It appears that not all requests of the referee can be fulfilled.
The manuscript is just an evaluation using descriptive statistics.
This, however, may correspond to what you call a mini review.

I have the following remarks to increase readability of the paper:

I.37: "was argued by all actors" should read "has been criticized by representatives"
more generally, the word "actor" calls up associations to theatre and movies, better words would be
"agent" or "researcher", "entrepreneur" etc.

I.94 "specialists"

I.101 "analyses"

I.106 omit the words "the authors"

Table 1: consider rounding some numbers and displaying them in a format such as "247 million", which
would enhance readability

I.438 shorter and better "comparing the number of pharmaceutical producers in Romania to the number of
pharmaceutical distributors, we find that the number of distributors is smaller."

Authors' Feedback:

I.37: was modified according to the suggestions

I.94: Plural was corrected

I.101: the word "analyses" was corrected

I.106: the words "the authors" were removed not to be repetitive.

All the numbers in Table 1 were round to increase readability.

I.438: Indeed the suggestion made is appropriate for the idea presented.
