

Author's feedback:

The manuscript has been revisited on the whole:

- The references have been seized in accordance with the norms of the Journal.
- We have increase two authors on the authors list as you can note it
- The presentation of the equations (7) - (11), (28) - (31) has been made according to the principle of the method used in the article that you can find in the references 7 and 8.
- As mentioned the examiner, there is not repetition of the form of solution between the line 151 and 186, we look for a resultant solution which is a combination of different forms of solitary waves i.e. a combination of the pulses and kinks of order 1 as well as the combination of the pulses and kinks of order 2.
- I reconsidered the way to mention the equations in the text as indicated by the reviewer (eq.(a)).
- Some small mistakes of seizure of the equations have also been corrected to make more accessible the understanding of this article.
- It is not easy for me to have the doi numbers of the article references

NB. All parts of the text that are marked in yellow indicate the corrections that have been made.

I would like to thank the reviewers that permitted me to improve the quality of this manuscript by their remarks.
