

SDI Review Form 1.6

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	Ms_BJMCS_21873
Title of the Manuscript:	Method of finding initial solution for the geometric programming problem
Type of the Article	Short Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	1. The manuscript should be divided into the following main sections: Abstract, Keywords, Introduction, Materials and methods, Results, Discussion and so on. 2. The authors should give more recent references on finding an initial solution of a geometric programming problem. 3. The authors should give 1-2 numerical examples to show the feasibility of their new method. 4. Some methods have been proposed to deal with the issue of finding an initial solution of a geometric programming problem. The authors should give a comparative study of their method with the existing methods.	1. We agreed with the reviewer and added main sections. 2. We agreed with the reviewer and added one more recent reference. 3. We agreed with the reviewer and added numerical example to show the feasibility of our new method. 4. We are planning to give a comparative study of our method with the existing methods in next article. This article was planned as a short research paper.
<u>Minor</u> REVISION comments	1. The authors should add more keywords.	1. We agreed with the reviewer and added more keywords.
<u>Optional/General</u> comments	The paper presents a method for finding an initial approximation (initial solution) in the problem of geometric programming. The authors describe the conditions, under which the geometric programming problem of obtaining a positive solution of the matrix equation is solved. The authors should make a major revision for their manuscript according to the revision comments given by the reviewer.	We thank the reviewer for his/her comments.
