

SDI Review Form 1.6

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	Ms_BJMCS_21873
Title of the Manuscript:	Method of finding initial solution for the geometric programming problem
Type of the Article	Short Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1. The manuscript should be divided into the following main sections: Abstract, Keywords, Introduction, Materials and methods, Results, Discussion and so on. 2. The authors should give more recent references on finding an initial solution of a geometric programming problem. 3. The authors should give 1-2 numerical examples to show the feasibility of their new method. 4. Some methods have been proposed to deal with the issue of finding an initial solution of a geometric programming problem. The authors should give a comparative study of their method with the existing methods.	
<u>Minor</u> REVISION comments	1. The authors should add more keywords.	
<u>Optional/General</u> comments	The paper presents a method for finding an initial approximation (initial solution) in the problem of geometric programming. The authors describe the conditions, under which the geometric programming problem of obtaining a positive solution of the matrix equation is solved. The authors should make a major revision for their manuscript according to the revision comments given by the reviewer.
