SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The manuscript is written in a perfunctory manner. It contains a lot of absurdities. On p. 1, the authors must clarify on what set the essinf of the function a is taken. On p. 2, woman's name Maria is written with a lowercase letter: "...we mention the work of Drabek maria...". By the way, none of the cited papers has Drabek Maria as an author. Moreover, in the text, one can come across undefined references. For what reason there are points after the first three formulas at the top of p. 3? Also, on this page, the authors begin few sentences with a lowercase letter: "let E be the space...", "let recall...". In Theorem 3.1, p. 4, an equation number is given without parentheses: "equation 1.1". It is obvious that, in the formulation of this theorem, the word "Then" is not in its place. Thus, it is not clear in what sense readers must understand the phrase "for each compact interval $[a, b] \subset]\omega, +\infty[$ ". And so on and so forth...	
Minor REVISION comments		
Optional/General comments
