| Title of the Manuscript: | On the bounds of the expected nearest neighbor distance               |
| Type of the Article      |                                                                       |

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

| <b><u>Optional/General</u></b> comments    | <p>This is an interesting paper on interesting theme. The introduction is informative, the presentation of the main results is clear, the mathematics used is correct and the references given are adequate.</p> <p>This paper found upper and lower bounds on the expected nearest neighbor distance for distributions having unbounded supports <math>(-\infty; +\infty)</math> and induced lower and upper bounds for logistic and Laplace distributions, as typical. Then we found the risk of nearest neighbor of their distributions.</p> <p>It is good study.</p> |                                                                                                                                                                               |
