

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	Ms_BJMCS_24446
Title of the Manuscript:	The behavior of two coupled mechanical oscillators in non-linear fields and the possibility of obtaining controlled halts
Type of the Article	Original research papers

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. The experimental results must be described in more details. 2. The whole paper must be rewritten in a more compact way. Many basic manipulations are repeated in many parts of the paper. 3. Line 253 of the revised paper is written in spanish(?).	Dear Sir 1. The description of the experimental part is not the purpose of this work, being an especially theoretical one. The authors have tried to obtain the analytical solution to the general problem, and not just a particular solution, determined from approximate numerical considerations. We have the intention to develop this idea into a larger project. Yet we are seeking to add a few details about experiment. 2. We shall seek to rewrite parts of the work in a more compact way, although this work is quite large because we have opted for a detailed writing, for a better understanding. 3. We reviewed line 253.
