

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	Ms_BJMCS_33615
Title of the Manuscript:	Text Summarization versus CHI for Feature Selection in Arabic Text Classification
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The Author claims that "The paper emphasizes text summarization as an effective tool for feature selection. It explores its use in different areas (Economy, Politics, Religion, and Sport). In addition it is a comparative study that aims to compare and explore existing feature selection techniques." Hence it is simply exercise work. So, This paper should go under 11. Method Articles and NOT under original research work.	This paper demonstrates the effectiveness of using text summarization for feature selection against well-known techniques. Feature selection is important for text classification and categorization. A few researches consider Arabic text document and in particular feature selection, text classification and categorization. This paper researches these problems. Furthermore, Arabic language needs special treatment when used in WEKA. Arabic text is not entered directly as input, but it passes through pre-processing steps before. This paper is not an exercise. It constitutes exploration and proof by demonstrations that are well established research methodologies in computer science.
