

SDI Review Form 1.6

Journal Name:	<u>British Journal of Mathematics & Computer Science</u>
Manuscript Number:	Ms_BJMCS_30520
Title of the Manuscript:	Rootless B-Fredholm operators
Type of the Article	Short Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments		
Optional/General comments	1. Many citations have been cited in this note. The author(s) should clearly point out that what is new, or different from, or improve on the previous works (results, theorems, method of proof, etc.) 2. Example 3.3 is trivial. The rootless of $T = S$, ($n = 1$) is immediately obtained from the definition of $T = S^n$, $n \geq 2$, (p.4. line 13) without using theorems 2.2 – 3.1. The author(s) should give an example of proof of the rootless of $T = S^n$, $n \geq 2$, of B-Fredholm operator using these theorems. Other suggestions: numbering pages and equations; checking parenthesis.
