

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	Ms_BJMCS_30609
Title of the Manuscript:	Simulation of Minimum Path Estimation in Software Defined Networking using Mininet Emulator
Type of Article:	Short Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
From my point of view, the manuscript does not meet the standard of 'British Journal of Mathematics & Computer Science'. I suggest reject it. The reasons are as follows: 1. The comments are not responded properly. I understand that the authors may have no enough time to conduct new experiments. However essential analysis is still necessary and could be provided in the manuscript. 2. The authors added some related work in the manuscript. However they are not really relevant to the present work. I could not find the logic underneath. 3. As a research paper, tests are not persuasive enough. The advantage and effectiveness of their work compared with other methods are not well presented. Such comparisons are required to convince readers that the proposed system outperforms what already exists. Therefore, I don't think the manuscript is scientifically robust and technically sound.
