

Editor's Comment:

Article: **Radiologic pattern of sputum-positive Pulmonary Tuberculosis (PTB) among immunocompetent patients in Gwagwalada, Nigeria**

The author does not fully answer the questions.

Fibrosis it is old changes of lungs and they are usually accompanied by calcification.

The simple tomography method is not expensive and it is usually used. This research should include the simple tomography or CT. Because need to eliminate or confirm the destruction process in the lungs.

90% of patients who have destruction have positive sputum test. In addition, tomography can to show the changes in the mediastinum, which is very important for tuberculosis. History of the past history of tuberculosis is also important and it is necessary to specify in this article. Because it has an impact on the change in the X-ray.
