

Editor's Comment:

The Review of the Article 2016_BJMMR_27076 titled "Lipoprotein (a) particles characterization by Dynamic Light Scattering" submitted to British Journal of Medicine and Medical Research has now been completed.

As an Academic Editor of British Journal of Medicine and Medical Research, and after my deep analysis of the manuscript and my re-evaluation of the reviewers' comments and also my re-review of the revisions made by the authors, I notice that:

Apart from some changes not presented and for a better information the authors added the reasonable changes required in the Introduction, the Methods, the Results and the Discussion (revised and separated clearly in two parts) including also the illustration by an additional Figure elucidating the Lp(a) particles.

I consider these practical adequate changes, and particularly the fewer specific ones , valuable and constructive for the manuscript.

All the additional adjustments improved significantly the current form of the revised manuscript and, accordingly, I believe at present that the manuscript has the potential to make a good contribution to the biomedical research literature in our British Journal of Medicine and Medical Research.

As an Academic Editor of British Journal of Medicine and Medical Research, and taking into consideration of the major constructive recommendations completed, together with the improved condition of the manuscript, **I accept the publication** of this article in the British Journal of Medicine and Medical Research.
