SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Comment #1: small sample size Comment #2: Abstract, Conclusion (and in the text): The authors conclude that 'adolescents with early onset T2DM are more likely to develop MS' This should be better described as an 'association' because of the overlap between T2DM and MS	The adolescents with family history of early onset type 2 diabetes are rare since early onset type 2 diabetes make up < 5% of people diagnosed with type 2 diabetes. This group is defined as Other Specific Types of Diabetes therefore the number of adolescents with this condition will always be small. Noted
Minor REVISION comments		
Optional/General comments
