SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<p>(1) Line 27: The reference for ACR criteria should be cited</p> <p>(2) Line 93: The word "ACPA Negative" has to be added in Table 2-column 1</p> <p>(3) Line 177: The statement of "genetic heritability was roughly 605 (ref 43)" should be further explained.</p> <p>(4) Line 190: What means that "share epitope for ACPA between smoking and RA"?</p>	
<u>Minor</u> REVISION comments	<p>(1) Line 52: The abbreviation of ACPA is derived from "anti-citrullinated peptide or protein antibody". The word "cyclic" seems not necessary.</p> <p>(2) Line 54: "HEp-2" but not hep2 cells</p> <p>(3) Line 167 Table 5: The rate of CAD in Kuwait general population is N/A. However, it seems not different from RA population as described in the text. It is necessary to add the number in the Table.</p>	
<u>Optional/General</u> comments	The authors described the prevalence of serological findings (RFs, ACPA, RFs+ACPAs) and common comorbidities in KRRD from 2023-2015 vs. general Kuwait and other non-Kuwait RA populations in western countries. Some unique findings are observed.
