SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<p>The manuscript is bit confusing starting from the aim of the study. Please check the following points:</p> <ol style="list-style-type: none"> 1. Aim of the study should be clear and restructured. 2. The study is supposed to involve newly diagnosed type 2 patients who were either on diet control or on oral antihyperglycemic agents and comparison between two modes of treatment over a year. But this objective has not met anywhere in the manuscript except for figure 1 but still it shows 6 months follow-up. 3. The newly diagnosed patients are having duration of disease more than 10 years??? 4. Some patients are having complications too as indicated in the table 2 5. The tables and analysis were more gender based rather than what's been mentioned in the aim. 6. The statistical analysis should have been carried out for six groups as mentioned in figure1 throughout instead of making it a gender based study and comparison. 	
<u>Minor</u> REVISION comments	<ol style="list-style-type: none"> 1. Limitations of the study 2. Measurement units are missing throughout in tables especially in the biochemical tests 3. English language editing is required. 	
<u>Optional/General</u> comments
