SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	In this manuscript, the authors compared the effect of intensive diet, physical exercise and lifestyle intervention with medication controlled management in newly diagnosed T2DM patients. However, there are still some concerns regarding this manuscript.	
<u>Minor</u> REVISION comments	1, Subjects located in each group? 2, A total of 1850 patients were recruited in the study, why only 1386 patients were randomised? 3, The conclusion should be more precise rather than general. Because the results only focused on some parameters in A1c, HDL, LDI, and so on... 4, The medication therapy (the doses, the mono or the combination), the exercise (which type of exercise), and lifestyle intervention should be described in detail.	
<u>Optional/General</u> comments
