SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	<ul style="list-style-type: none"> • Please provide references for the following: introduction line 7; introduction 2nd paragraph lines 2 and 4; page 2 line 7 and 16; • Line 16: I would suggest the inclusion of an explanation saying that the regulations were provided by the governments not by the medical organization. They might have been key in this process, but they are not policy makers. • Line 22: I would suggest from "deceased patients" or "deceased people" • Page 2 last line: explain what do you mean by organ transfer. • Page 3 lines 3-6: I would suggest you to rephrase it to make your point clearer. • Page 3 in general obstacles for organ donation: I would suggest to specify that these obstacles are related to Egypt • Page 4 lines 9-12: reference these statements • Page 5: use methods instead of methodologies (methodologies are related to the theoretical assumptions of the methods used); describe the type of study (descriptive, exploratory, cohort....) • Describe if the participants signed an informed consent form in the methods section • Describe in more details the validation process of the questionnaire in the data collection section 	

SDI Review Form 1.6

	<ul style="list-style-type: none">• Page 9 second paragraph: I would say a there was not a significant difference between recognition or not of brain death• Page 12, line 2: use “brain death” instead of “brainstem death”• Page 13 last paragraph: you should include in this discussion the possible future repercussions for the living donors and how they would be supported by the health care system if they develop organ failure.• Page 14, second paragraph, line 26: there is a contradiction in the phrase, you suggest that there should be an insurance program for donation but in the end you say that it would open door for organ trafficking. Please state your position.• The weaknesses of the study must also be described in the conclusion. Ex: are there threats to internal/external validity? The fact that only one setting was investigated could have influenced the outcomes? Etc... <p>Ethical Issue- There should be described the used of informed consent form for the participants of the study, we need to check with the authors. If the informed consent was not sought, then I would describe it as an issue.</p>

SDI Review Form 1.6

<u>Minor</u> REVISION comments	<ul style="list-style-type: none">• Introduction lines 3-7: the phrase is redundant; I would suggest to rephrase it.• I would suggest to write the acronym before you use it. You did in the abstract, but I would suggest to cite in your text as well (OD, QUH, OPD, EHA)• Page 4 line 1: specify which population you are talking about• Page 10, first paragraph after table 4: try to make this sentence clearer for the reader, explain what the high and low scores mean• Page 11, Discussion section 1st paragraph: lines 17-18 rephrase for more clarity; line 23 write “other OD researches”	
<u>Optional/General</u> comments	<ul style="list-style-type: none">• Results first paragraph: I would suggest “mean age” instead of “age averaged” <p>The topic of the study is not novel worldwide, but for Egypt I believe this paper would be a great advancement. It is important to understand the profile of the local population and their knowledge on organ donation to propose new studies that could contribute to the development of the organ donation and transplantation activities locally.</p>
