

Reviewer's Comments:

I suggested to adapt the title of this MS to be suitable the subject.

Author Feedback:

We believe that the current title is appropriate and adapted to the MS. In fact, the first review suggested this title to replace the old one which was as follows **"*In vitro* studies on the action of different *Trichoderma* spp. on growth of *Fusarium oxysporum* f. sp. *vasinfectum* the causal agent of cotton wilt"**

We responded and endorsed this Reviewer's suggestion and agreed to change the title to fit the MS content **"Biological control of *Fusarium oxysporum* f. sp. *vasinfectum* isolated from Ivorian cotton by *trichoderma* spp."**

This is the first Reviewer's comment:

It is very difficult to say that this work belongs to biological control studies, because in case of biological control it must contain at least some pot experiments, but this work has not any studies as pot experiment. Therefore, I suggest that the author have to change the title of this MS to be (as example): ***In vitro* studies on the action of different *Trichoderma* spp. on growth of *Fusarium oxysporum* f. sp. *vasinfectum* the causal agent of cotton wilt"**.

Our answer:

"The suggestion of the reviewer's relevant and we believe and agree to change the title. Thus, the title becomes now: *In vitro* studies on the action of different *Trichoderma* spp. on growth of *Fusarium oxysporum* f. sp. *vasinfectum* the causal agent of cotton wilt.

However, the title of an MS can always be revamped. But it must be adapted to the subject or express the content of the MS. Thus we believe that the new title of our MS may be now: **"Biopotential of some *Trichoderma* spp. against *in vitro* growth of *Fusarium oxysporum* f. sp. *vasinfectum* causal agent of cotton wilt"**.
