SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Overall, the study is well done and provided clear messages. My lone comment: is it possible to determine the patients who are treatment naive and treatment experienced for interferon. Otherwise, i found it a well established study. Thanks	We could not distinguish patients naive or exposed to interferon because the information was not collected from the field. Secondly, from the LANL, we could not get the information on interferon treatment.
Minor REVISION comments		
Optional/General comments
