

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	Ms_BMRJ_29557
Title of the Manuscript:	Evaluation of DNA based techniques for the diagnosis of Human Vaginal trichomoniasis in North Indian Population
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
4- The analysis of complaints among all the age groups was found to be significant (p=0.0007). Not found in table 2, so it is better to view in the table. However, you mentioned the P value (P=0.037) in figure 2-A. 4- The P values are only mentioned in text but not in figure.	1. As suggested by reviewer, the analysis of complaints among the age groups has been included in new Figure 2 that shows the P values (please see page no. 23 of revised manuscript). Accordingly the text in the manuscript has also been added. It was technically not possible to show P values in the table, which we tried. 2. P values has now been included.
4- OSOM, mention the full term at first. 4- OSOM is name of brand/company, which makes TV diagnostic kits.	1. Full form has now been included in the revised text (please see page no. 3 of the revised manuscript).
3, 4- Tables and figures must be self-explanatory. So, any abbreviation must be presided by the full term. 5- In figure 1: Write the exact sensitivity percent of each bar. 6- Statistical analysis is not clear in tables and figure 2.	Necessary modifications have now been carried out in the manuscript and figure with sensitivity is mentioned in revised figure 3 (previously figure no. 2). Figure no. 1 is just a representative gel picture of the clinical samples therefore no sensitivity bar can be included.
