SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	This article represents interesting data on recent finding of different strains of herpes viruses in Sudan. Viruses were detected in blood serum of horses and donkeys from different regions of the country using ELISE kits. As for me this article is more epidemiological than microbiological. The methodological base of this study is simple. However the presentation of the data should be improved. Table 1 should be arranged properly. It's heading should be expanded and all information should be included to it. Statistical analysis data should be mentioned. Statistical analysis section could be added to the Methods. Language correction is welcome (for example REFERANCES - REFERENCES) Conclusion section should be improved and organized as the general summary of main result of the study.	
<u>Minor</u> REVISION comments		

SDI Review Form 1.6

<u>Optional/General</u> comments	I'd recommend to add to the Discussion section some comparison with the other studies of herpes viruses in animal populations in other countries with references on that studies.
