

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	Ms_BMRJ_27150
Title of the Manuscript:	Antibacterial Susceptibility of Urinary Escherichia coli from Outpatients with Community Acquired Urinary Tract Infections, Report from Tertiary Health Care Center, Egypt.
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The research was adequately reviewed; authors should consider the following observations. Abstract, Introduction and Methodology: Authors should consider manuscript. Results: Table 1, constitute problem in the research work, the information provided is not detail enough vital information were suppressed. Authors need to review the table such as 10-15, 16-20, 21-25 and 26-30. This will open up a lot of observation for authors to present in the research. In addition, interchanging sensitivity and resistance is confusing to readers authors should review this. I suggest authors to review the topic since they are working only on resistance pattern of the isolates. Research work needs serious review.
