

Editorial comments:

In general the paper was well written.

I have revised some words errors and terms adjustments (such as levels to concentrations).

Some issues should be revised before the acceptance.

1. All abbreviations should be spelled out initially.

2. The topic used "The role of hs-CRP....."m however in abstract method, there was no mention of hs-CRP. Please revise it.

3. In the text, the part did not mention of what variables were exposures and what variables were outcome of interest. Please prescribe in detail. In particular, if the authors wanted to use the topic of CPR, the method should highlight the CRP as what (dependet or non dependeant variable)

Author's Feedback:

Appropriate corrections have been done as per the suggestions.
