

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Cardiology and Angiology: An International Journal
Manuscript Number:	Ms_CA_30903
Title of the Manuscript:	Cardiac patients' information integration in dental and medical records: A four-year study
New Title:	A four-year study of chronic patients' information integration in dental and medical documentation in secondary care setting
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The schematic presentation of the steps carried out in the study is not available In other words I mean flowchart showing the major dramatic events of the study	"Mandatory" administering of a "chart" or a graph or a picture illustrating "steps" carried out in the study..... as requested here may not be so critical. Such charts occupy a huge space of the paging size allowed for the paper, reason why they are not commonly used in published manuscripts. Process charts like these may be more convenient if the submitted work was a form of academic presentation, such as thesis or dissertation, and the likes. In this work, detailed information about the research procedures are well addressed in the methodology section.
