

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Cardiology and Angiology: An International Journal
Manuscript Number:	Ms_CA_36200
Title of the Manuscript:	Acetyl Salicylic acid and Omega 3 Fatty Acids in the pro resolving pathway of Cardiovascular Disorders
Type of Article:	Review Paper

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have revised the paper according to the reviewer's previous remarks. However; the authors should address the critical issue of proofreading, as the plagiarism report shows us a 67% of plagiarized content (See Document attached).	Respected Sir Since the manuscript is a review article we did use the findings of a number of authors. The original primary data is referenced as 60 references. Our manuscript is only a secondary data of what has already been shown by other researchers. In this compilation we have attempted to provide a conceptual framework and a narrative review to understand the pharmacological properties and action of low dose aspirin. However the highlighted areas in the attached document have been rephrased and the data is expressed in our own words.
