

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Cardiology and Angiology: An International Journal
Manuscript Number:	Ms_CA_36200
Title of the Manuscript:	Acetyl Salicylic acid and Omega 3 Fatty Acids in the pro resolving pathway of Cardiovascular Disorders
Type of Article:	Review Paper

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Thank you for trying to revise the manuscript. Nevertheless, I do not feel that this revised version can be accepted for publication at this time. The authors changed title of the manuscript emphasising pro-resolving pathway connection to hypertension. However, added section on hypertension does not provide any sufficient information on hypertension. It has just a broad description of CVD effects of omega-3 FA and not clear why authors included omega-6 in this section. Also, it is still unclear why authors decided to include the term "atherosis" and even elaborate more on its definition. The terms are still misspelled and English correction has not been performed along with other previously mentioned comments.
