

SDI Review Form 1.6

Journal Name:	Cardiology and Angiology: An International Journal
Manuscript Number:	Ms_CA_38020
Title of the Manuscript:	Clinical Significance of Creatine Kinase-MB Elevation in Patients with Chronic Kidney Disease before initiation of Hemodialysis
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Thank you for this article but my query about this is CK MB might have increase because patients with CKD present hypertrophy of the left ventricle and this can lead to the rise of CK MB. So these findings may not be surprising especially when the eGFR is less than 60. If these patients are not on treatment they might even develop pulmonary oedema which is part of the fluid overload seen.	
Minor REVISION comments	NONE	
Optional/General comments	NONE
