

Editor's Comment:

I recommend accepting with the following changes:

Abstract

"The nature of adsorption has been interpreted from the shape of adsorption isotherms."

Shape?? Do the authors actually mean to say that they are evaluating the "fit" to the Langmuir equation? Clarify please.

Intro

- 1) complex compounds with the simple and readily available molecules (drop "the")
- 2) The Arrhenius [3] had proposed th... (drop "the")
- 3) industries like coke plant, to:...industries such as coke plants,
- 4) Enzyme based process... for change to: Enzyme-based processes or An enzyme-based process...
- 5)

"Various processes such as oxidation, biodegradation, solvent extraction, incineration, reverse osmosis, and adsorption also proposed to remove phenolic compounds from contaminated water, among which adsorption is one of the most effective technique at either laboratory or industrial scale."

Note: this is not a correct English sentence and also requires references.

6)

A search of literature indicated that several reports are available on adsorptive interaction and removal of phenols using different types of adsorbents, but few work done on the adsorption and removal of phenols using metal hexacyanoferrates (II) as adsorbents.

Note:

"a search of literature..." (Insert "the")

"but few work done..." (change "few" to "little work has been reported")

I am stopping here as this is a service for which I am generally compensated financially. While I appreciate the great difficulty in writing a scientific paper in a non-native language, if one chooses to publish in a journal, one must take the necessary steps -- including hiring a proofreader if necessary-- to ensure the quality of the presentation. If not, the credibility of both the Journal and the Author at risk.
