

Editor's Comments:

Regarding this manuscript I have some supplementary comments:

-The authors must carefully revise the manuscript according to reviewer comments

The Material should be described with major details - In this part the authors should provide complete information about the all used equipment (type, producer, country). Also for all used parameter must be presented the description (definition and measure unit).

The discussion of results should be implemented by comparing them with previous literature data - The obtained data should be more discussed according to the literature reports, in order to present the innovation and novelty of this study.

In table 3 must be used Sentence case for all parameter, ie. Bulk density and Wettability

The English spelling must be revised in all manuscript.

In my opinion, the authors must also improve the aspects:

- The aims of the study must be clearly and more complete formulated.

-The innovation and novelty of the results should be highlighted.

Author' Feedback:

Thank you for the interest you attach to this document. We have tried to revise the document with the best of your comments. We hope this will meet your expectations.
