SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	Most of your statistical tests showed that the two tribes were at par in respect of the variables. It would even be more interesting if you raised the level of significance (p level) to say 90%. So statements like Angami community is less vulnerable than Ao though statistically at par in community vulnerability may be contradictory to some readers. Paragraph (line 46 – 71) too long with two different topics. The also seem to be inadequate citation where a lot of information seem to be borrowed from some other sources. A statement would also suffice why vulnerability assessment was more appropriate in relation to other methods even if you stated that it is complicated. Citation system; Han et al., 2001; then [21]. Stick to one method. I would also suggest more discussions of the results than is currently the case where some results are not discussed at all. For instance, more Ao are educated but are more food insecure, have poor housing, - therefore less resistant to exposure, more sensitive to vulnerability or susceptibility, have less savings and less stable occupation. What is happening to their type of education?	Corrected as per the suggestion Divided the paragraph according to topics with citation Statement modified as intended by the reviewer Followed as per journal format Elaborate discussions added with citation wherever necessary.
<u>Optional/General</u> comments
