<u>Compulsory</u> REVISION comments	Excellent research work on the assessment of Spatial variability of soil properties in Gopalapur microwatershed, Gundlupet Taluk, Chamarajanagar District, Karnataka, India. The research revealed improved and additional tools and options for assessing the spatial distribution of physico-chemical properties of soils relative to its fertility and productivity status. The use of ordinary kriging method has been shown to be an excellent tool in predicting the spatial distribution of soil macro and micro nutrients for determined and undetermined soil locations.
