

**SDI FINAL EVALUATION FORM 1.1**

**PART 1:**

|                          |                                                                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Journal Name:            | <a href="#">Current Journal of Applied Science and Technology</a>                                                                                                        |
| Manuscript Number:       | Ms_CJAST_42993                                                                                                                                                           |
| Title of the Manuscript: | Comparison of Anchorage Strength of Bonded-In Steel Bars with Epoxy Resin, Varying the Superficial Treatments and Moisture After Bonding, In Corymbia citriodora Timbers |
| Type of Article:         | Original Research Article                                                                                                                                                |

**PART 2:**

| FINAL EVALUATOR'S comments on revised paper (if any)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Authors' response to final evaluator's comments                                                                                                                                                                                                                 |

| <p>The revised paper has made some progress, but it has not changed much.</p> <ol style="list-style-type: none"> <li>1. The description of the size of the specimen is still not clear, and the analysis of the test <b>result</b>. It is suggested that the sample of the test pieces can be given in the form of the <b>specimen photos in the test, which will give the reader more intuitive understanding and analysis.</b></li> <li>2. The loading device and loading rate are not mentioned. Steel is a material related to the change of loading rate.</li> <li>3. the test results and conclusions are too simple, and this part has not been revised.</li> </ol> | <ol style="list-style-type: none"> <li>1- We acknowledge this comment. Size of the specimens were adding in the paper.</li> <li>2- We acknowledge this comment; it has been reviewed.</li> <li>3- We acknowledge this comment; it has been reviewed.</li> </ol> |
