

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	European Journal of Nutrition & Food Safety
Manuscript Number:	Ms EJNFS_36022
Title of the Manuscript:	Effect of Gum Arabic as Prebiotics and lactobacillus casei shirota (LcS) as probiotic on Oxidative Stress and Renal function in Adenine-Induced Chronic Renal Failure in Rats
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. Statistical differences were shown by superscript. However, again some values in table do not possess superscript. 2. In relative kidney weight results, group 5 and 6 were shown significant which bear values 0.42 and 0.39 respectively. This is bit doubtful, please check the statistics. 3. 0.038 ± 0.02 relative kidney weight in group 7. Please check the value and significance with other group again. 4. Grammar and sentence construction is again a concern 5. Our results agreed with those of Anand et al., (2014)] who illustrated that, Adenine caused several oxidative reactions in renal tissues which might lead to an elevation in several oxidative markers such as GSH, SOD, catalase and TAC. However, in the current study authors have found administration of adenine profoundly decreased the serum and renal activities of these antioxidant enzymes. Then how their results are in agreement with Anand et al 2014. 6. Authors have used GA and AG interchangeably for gum. They should have used the abbreviation uniformly. 7. Discussion is not appealing atleast for me. 8. Taken together, from the first and second review comment and reply from the authors, I consider that authors have failed to address the queries adequately. Still there are many deficiencies in the manuscript which avoids it from being published.
