

**Editor's comments:**

I have 2 specific comments:

1. Conclusions / line 18: "The findings from this study have social influence globally" is an overstatement, the current study does not have the power for such a conclusion,
2. Methodology: even after the revisions, it is not clear at all why the quotes from only two participants were presented/discussed.

I hope this can help to improve the quality of the manuscript,

**Author's feedback:**

1. I have revised this statement not to reflect its' having global significance.
2. I added a statement referring to why there were only quotes from two participants. This is found in 'Study setting and participants.'
