

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International STD Research & Reviews
Manuscript Number:	Ms_I-SRR_26615
Title of the Manuscript:	Prevention of Mother to Child Transmission of HIV; Socio-economic determinants of knowledge, attitude and practice among pregnant women in Abia State, Nigeria
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. Some places author had written reference after full stop and at some lines before full stop. Is it as per the style of Journal? Author need to check it.	- Sorry, this has been corrected
2. Manuscript still needed grammatical revisions	-Grammatical revision effected
3. Sample size determination had not explained clearly. There is ambiguity in the calculation- if calculate sample size by written formula with the values ($p_1=58.3\%$, $p_2=68\%$, $u=84\%$, $v=1.96$), getting sample size approximately 384 in each groups. And author had not mentioned about the need of correction factor.	-There is need as the population studied were pregnant mothers attending ante natal care. The number are limited coupled with the fact that it was those already enrolled that were studied – second visit and above. Equally they are studied once irrespective of number of visits or gestational age. Also correction is a standard formula for such conditions and has been used for studies. You employ the formula after calculating using standard formula to be able to get ' n ' used in the formula
4. Author should follow uniform style in tables for example- in some tables author had represented <i>frequency by n</i> and in some tables <i>freq.</i>	-Sorry, this has been corrected
