

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International STD Research & Reviews
Manuscript Number:	Ms_I-SRR_45427
Title of the Manuscript:	VARIATIONS IN ELECTROLYTE AND SALIVARY AMYLASE (PTYALIN) LEVELS IN HIV-POSITIVE SUBJECTS
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR’S comments on revised paper (if any)	Authors’ response to final evaluator’s comments
The following corrections have been done to the manuscript titled variations in electrolyte and salivary amylase levels in HIV+ subjects- 1) One minor comment is that although the aim of the study is given, it can be appreciated if the specific objectives are also stated in relation to the topic. Otherwise the manuscript is coherent and they adhere to logical development from theory to application. 2) No more corrections are required after inclusion of the specific objective to examine the various changes in salivary Na+, K+, Cl-, HCO3- and Ca2+ ions of HIV+ subjects in comparison with healthy (HIV-) individuals. 3) It is great that the authors have now justified the methods used for data collection used.	Specific objective was stated in our previous response to reviewers’ comments. Do see it highlighted in yellow at the end of the Introduction section; just before materials and methods.
