PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Arduous and well executed work, but, 1. Need thorough editing, as space between words and punctuation marks are not well maintained in many places in the article. Few grammatical errors also to be corrected. 2. Like Table 3 (n=29), there should be another table mentioning some details about patients showed HbF level< 10% (n=71). There should be few words in the Discussion --- how these two groups are different. 3. The space for P-value in Table 2 is empty. 4. In Conclusion the author has concluded that HbF level has no effect in severity of the disease among studied sickle cell patients, unless the HbF level more than 10%. But in the Abstract (conclusion) the last portion is missing (for n=29).	1- The space between the words and the punctuation marks has been corrected as well as the grammar errors. 2- Table 4 was done to represent 71 patients with HbF level< 10%. And the comparison between two groups was included in the discussion 3- The P.value was added in table 2 4- The abstract conclusion was modified
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	Is there any more data detailing relationship of Afro-Asiatic and Niger-Congo tribes with this article?	More detailed was added in the discussion
