PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	An interesting aspect of this largely quantitative determination of specific differential blood cell components is the specific array of distinguishing features in cell count in African /Nigerian region. Population of differential determinants of CD4 cells and of TNF-alpha appears to constitute an axis for determinants in progression of HIV infection in this patient population. PUBLICATION is advised. Followup studies of qualitative indices in terms of quantitative analysis appear a promising resource in further understanding biology of differential African and Nigerian HIV infection patients on anti-retroviral therapy.	Thank you for your review, the analysis of data for a follow up study is already underway and will be sent to this journal in no time.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
